Delivery Methods

Commvault instructors will deliver comprehensive and effective training for your team, where you need it and when you need it. Our experienced registrars can help you determine the best learning solution for you. Whether you choose a standard or customized curriculum, we can bring a fully equipped classroom to you, we can utilize our network of classroom facilities, or we can provide virtual training utilizing the latest web conferencing technologies.

Instructor-led Training (ILT)

Commvault Instructors will deliver comprehensive and effective training for your team, where you need it and when you need it. We realize that you have many different needs and a host of logistical issues to consider so let us help you determine the best learning solution for you. Whether you choose standard or customized curriculum, we can bring a fully equipped classroom to you, we can utilize our network of classroom facilities, or we can provide virtual training utilizing the latest web conferencing technologies.

Virtual Instructor-led Training (vILT)

You need to update your Commvault® software skillset, but you don't have the time or travel budget to attend an instructor-led course at a Commvault® facility? Commvault Education Services offers real-time, interactive, virtual instructor-led training (vILT) courses that can take the pressure off your schedule, and your budget, while delivering a high quality, results oriented outcome. Students participating in vILT courses have full access to instructors, classroom discussions, question and answer sessions, and all lab exercises; just as if they were on-site. The Commvault Virtual Lab (CVLab) component is a vital learning tool that offers the participating student a rich, flexible hands-on experience with the Commvault software platform. It shares a common console with the Education Advantage (EA) portal so that instructors can support and guide the remote participant.

eLearning

Commvault Education Services offers a wide selection of individual courses as self-paced eLearning. These eLearning courses often include similar content to that of our classroom and virtual ILT courses, while others focus on a commonly used feature. These courses are also available (via download) with a site license, enabling access for an unlimited number of users located at a single geographic location. Yet another cost-effective option that saves time and money by eliminating employee travel!

Onsite Education

Education without travel. With Commvault Onsite Education, customers can attend onsite classes at their own facility. A fully-customized and customer-focused alternative, onsite education addresses specific customer goals and requirements. The solution delivers focused content and instructor interaction, through one instructor-led course, or a combination of the Commvault® Core Fundamentals course and a specialty course. Onsite Education optimizes team interaction, information retention, and minimizes class travel, offering an extremely productive education option. Maximum class sizes vary by type of training and location; when booking with your regional registrar please specify your requirements. Please refer to the document link below for system guidelines associated with the completion of Onsite Training.

Certified Training Instructors

Our instructors are trained and certified to the highest available standards. In addition to achieving certification on our standard courses, they undergo a comprehensive and rigorous train-the-trainer program which includes further classroom study, best practice delivery training and hands-on experience working with Commvault® software.

Our instructors have direct access to Commvault support and development communities, providing them access to the most up to date knowledge base for Commvault® software. All instructors are required to renew their certification on each version of Commvault® software.
