

Commvault Command Center

Description

Discover how simple it is to set up your data protection environment with the Commvault Command Center™. Learn about Commvault's integrated product solutions such as: Commvault Complete Backup and Recovery™, Commvault Activate™, and Commvault Disaster Recovery™.

Benefits

Upon completion of this self-paced training you will be able to:

- Understand the concepts of CommCell® environment and its components: CommServe server and MediaAgent.
- Configure Commvault® software storage capabilities including disk, cloud, and tape storage, and know the concepts and functional highlights of Commvault Deduplication.
- Perform the core setup of the Commvault Command Center, and administer common tasks, create a server plan, as well as secondary copies for offsite data protection.
- Configure the Virtual Server Agent, run backups, and recover files.
- Use Commvault Command Center™ monitoring tools to check the health of the CommCell® environment.

Who should attend this course?

This course is intended for operations and administration personnel who are new to Commvault software and oversee day-to-day administration and management of Commvault Command Center™.
