

Workflow Fundamentals

Description

This training is designed to provide a basic understanding of the Commvault® Workflow engine. This course introduces concepts including common workflow activities, user interactions, data flow and variables, using Qcommands, error checking, and using XML input files. Upon completion of this course the learner will be able to construct basic workflows to control and validate job activities, modify client entity settings, and log events in the event viewer and through Email.

Who should attend this course?

This course is designed for administrators and engineers who intend on implementing automation solutions to better control day-to-day Commvault operations.

Delivery Methods

Virtual Instructor-led

Highlights

Product Release

- Commvault Version 11
